This book does not include Access Card. For Book with Access Card buy Acquiring Medical Language with Connect Access Card 1st Edition ISBN 1259382427 Most medical terminology texts present the roots on one page, body system on one page, and a list of related anatomical terms on the next. The result is students fail to make connections and end up approaching the course as a never-ending series of lists to be memorized. Acquiring Medical Language is language focused. It introduces students to roots with illustrations of body systems and surrounds that information with term blocks that include specific word roots, examples containing that root, and some interesting facts to make

the information more memorable. This exposes students to all the relevant information (the root, its meaning, its use), so they see how it relates to the other roots in the context of the body system. Each chapter of AML also is structured around the S.O.A.P framework. S.O.A.P stands for the four general parts of a medical note: Subjective, Objective, Assessment and Plan. After introducing the student to the important roots and the medical terms relevant to the body system, the roots are presented using the SOAP note as an organizational framework. Terms are presented to students under the following learning objectives: S Subjective Patient History, Problems, Complaints O Objective Observation and Discovery A Assessment Diagnosis and Pathology P Plan Treatments and Therapies
