Twink M. Dalton, Daniel Limmer EMT-P, Joseph J. Mistovich, Howard Werman : Advanced Medical Life Support (3rd Edition) before purchasing it in order to gage whether or not it would be worth my time, and all praised Advanced Medical Life Support (3rd Edition):

0 of 0 people found the following review helpful. AMLSBy blah blahFirst of all sign up for NAMET membership its 50\$ a year and you become elgible for scholarships. The courses are advanced and often difficult to find since many people aren't certified AMLS instructors. SO This text prepares you for the AMLS course a two day course which has a written and practical portion. If you feel weak in your medical take the course or read the book. Its VERY worthwhile and you will learn something. Everything from skin to neuro with bits of info that sheds new light onto things you thought or were taught. Read the book and you will see what I mean. Its a medical book and how many medical calls does EMS get called for? TOO many. The book is designed to widen your view and include more differential diagnosis. Also to perform better history SAMPLE taking and perceptive to more conditions ie clinical

signs/symptoms. 5/50 of 0 people found the following review helpful. Five StarsBy Chan Woon ManVery good information for the emergency medical technician.0 of 0 people found the following review helpful. AMLS ReviewBy D. Gabriela DeckerWhen I got the pre-test, it all looked foreign to me. After going through the book and then the class (as and EMT-Intermediate), I was so amazed to learn so much in such a short amount of time! I actually got Instructor Potential on the Final Exam. This is a great book that will not only help you learn more, but think in a totally new way of "Differential Dx". Once you start using what you have learned from the book, you'll be amazed to find out how accurate your own diagnosis is to that of the ER. Great book and highly recommend class as well!

Going above and beyond the new DOT curriculum, this book offers a high level yet practical approach to the assessment, diagnosis and treatment of the full range of adult medical emergencies. Each well-illustrated chapter discusses realistic methods that a seasoned EMS practitioner would use moving from assessment-based procedures with initial management of the threats, to field diagnosis and management of treatable underlying causes. Includes real-world case studies. Assumes a familiarity with anatomy, physiology, and pathophysiology, and an overall understanding of the nature of medical emergencies. Assessment of the Medical Patient. Airway Management, Ventilation, and Oxygenation Therapy. IV Access and Medication Administration. Hypoperfusion (Shock). Dyspnea. Chest Pain. Altered Mental Status. Acute Abdominal Pain. Gastrointestinal Bleeding. Seizures and Seizure Disorders. Syncope. Headache, Nausea, and Vomiting. Case Studies. For EMTs, paramedics, nurses, and others involved in emergency medical care.

About the Author Twink Dalton is a nurse and a paramedic. She worked as an Emergency Department nurse, worked with EMS training programs, was a trauma coordinator and worked with the Omaha Fire Department and Pridemark Paramedic Services. She is now the Director of the EMS Division of the Mountain View Fire Protection District. Twink lectures nationally and is a well known author.
