**Kwasi Yeboah-Afihene : Afihene Total Health Management Sysytem: Afithmas (AFIHENE TOTAL HEALTH MANAGEMENT SYSTEM) (Volume 1)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Afihene Total Health Management Sysytem: Afithmas (AFIHENE TOTAL HEALTH MANAGEMENT SYSTEM) (Volume 1):

An investigative research report, with Obesity as a case study. There is an in-depth analysis of the courses of Obesity and it numerous co-morbid indications, as well as preventive measures. There is also a presentation of different form

of outcomes and quality management theories, which set the tone for the investigation. Business Intelligence and Analytics is also presented and an outcome research method with a lot of promise and cost savings to the healthcare Systems. The report culminated in AFiTHMAS, which is a Clinical Process Optimization Concept [Process Restraining] which also could potentially greatly improve health outcome, or patient outcome and inherently save the healthcare systems a tremendous amount of money in the long run, as well as patient satisfaction. It helps people to manage and control their health and healthcare risks more effectively, making well informed decisions base of their heightened levels of awareness of their state of health, and potential adverse health predispositions.
