**R.B. Vukmir : Airway Management in the Critically Ill** before purchasing it in order to gage whether or not it would be worth my time, and all praised Airway Management in the Critically Ill:

A definitive, technically detailed, decision-aiding clinical reference Airway Management in the Critically Ill presents a structured framework for properly assessing the airway management needs of the critically ill patient. It stresses proper assessment of the difficult as well as the routine airway, providing a successful strategy for pharmacologic intervention, using alternative techniques such as adjunct and surgical airway maneuvers, and evaluating long-term risks and complications of the procedures.

"a comprehensive review of the acquisition and maintenance of an airway for mechanical ventilation a well-referenced text providing useful information for those responsible for airway intubation." - Dona J. Upson, MD, FCCP, CHEST, April 2003 Promo Copy
