Andrew Kuntzman, Gerard J. Tortora : Anatomy and Physiology for the Manual Therapies before purchasing it in order to gage whether or not it would be worth my time, and all praised Anatomy and Physiology for the Manual Therapies:

2 of 2 people found the following review helpful. bought this as a gift...ordering one for myself!By melissaI bought this book as a gift for my sister who is thinking she would like to do massage....we can't get her out of book! I was the same way when it arrived to me. Easy to understand, flows with great detail and answers the questions in plain English.0 of 0 people found the following review helpful. Web interaction is for students with a registered class only ...By Lucia GiovanniWeb interaction is for students with a registered class only. (3 star factor.)Contents of book is otherwise well done for manual therapists. (5 stars.)0 of 0 people found the following review helpful. Very detailedBy izzesparksVery detailed charts and pictures of the body and cell functions

Anatomy Physiology for the Manual Therapies 1e is designed to meet the specific needs of students preparing for careers in the manual therapies, such as massage therapy and careers as physical therapy assistants. This book provides

the most appropriate depth of coverage for each body system -- in both narrative and visuals -- and by including relevant applications linking the content to situations they will face in their careers. Specially written applications with a focus on massage and physical therapy are included. An outstanding illustration program is also integrated to highlight important concepts and special diagrams are presented that point to origin, insertion, and innervation of muscles. This is crucial knowledge for massage therapists, physical therapists, and occupational therapists.

From the Back Cover **THE RIGHT TOUCH** Anatomy and Physiology for the Manual Therapies combines the recognized strengths of the best-selling author Gerard J. Tortora with the expertise of Andrew J. Kuntzman, a certified massage therapist and an award-winning educator with a doctorate in Anatomy. If you are planning a career as a massage therapist, a physical therapy assistant, an exercise therapist, in sports medicine, or another career in the manual therapies this is the text that can start you on the path to success. This book should serve as a great reference throughout your professional career. Anatomy and Physiology for Manual Therapies paired with WileyPLUS makes a wide variety of visual, audio, tactile, and blended resources easily accessible and provides ample opportunity to SEE, HEAR, and DO anatomy and physiology.

About the Author Gerard J. Tortora is Professor of Biology and former coordinator at Bergen Community College in Paramus, New Jersey, where he teaches human anatomy and physiology as well as microbiology. He received his bachelor's degree in biology from Fairleigh Dickinson University and his master's degree in science education from Montclair State College. He is a member of many professional organizations, such as the Human Anatomy and Physiology Society (HAPS), the American Society of Microbiology (ASM), American Association for the Advancement of Science (AAS), National Education Association (NEA), and the Metropolitan Association of College and University Biologists (MACUB). Above all, Jerry is devoted to his students and their aspirations. In recognition of this commitment, Jerry was the recipient of MACUB's 1992 President's Memorial Award. In 1996, he received a National Institute for Staff and Organizational Development (NISOD) excellence award from the University of Texas and was selected to represent Bergen Community College in a campaign to increase awareness of the contributions of community colleges to higher education. Jerry is the author of several best-selling science textbooks and laboratory manuals, a calling that often requires an additional 40 hours per week beyond his teaching responsibilities. Nevertheless, he still makes time for four or five weekly aerobic workouts that include biking and running. He also enjoys attending college basketball and professional hockey games and performances at the Metropolitan Opera House.

Bryan Derrickson is Professor of biology at Valencia community college in Orlando, Florida, where he teaches human anatomy and physiology as well as general biology and human sexuality. He received his bachelor's degree in biology from Morehouse college and his Ph.D. in Cell Biology from Duke University. Bryan's study at Duke was in the Physiology Division within the Department of Cell Biology, so while his degree is in Cell Biology his training focused on physiology. At Valencia, he frequently serves on faculty hiring committees. He has served as a member of the Faculty Senate, which is the governing body of the college and as a member of the Faculty Academy committee (now called the Teaching and Learning Academy), which sets the standards for the acquisition of tenure by faculty members. Nationally, he is a member of the Human Anatomy and Physiology Society (HAPS) and the National Association of Biology Teachers (NABT). Bryan has always wanted to teach. Inspired by several biology professors while in college, he decided to pursue physiology with an eye to teaching at the college level. He is completely dedicated to the success of his students. He particularly enjoys the challenges of his diverse student population, in terms of their age, ethnicity, and academic ability, and finds being able to teach all of them, despite their differences, a rewarding experience. His students continually recognize Bryan's efforts and care by nominating him for a campus award known as the "Valencia Professor Who Makes Valencia A Better Place to Start." Bryan has received this award three times in the past six years.
