Great interactive learningBy CustomerIm back at school after and almost 15 year hiatus, and I have a strong dislike for textbooks, but this one is great. The web course on cengagebrain.com is a total winner! Love the interactive learning and practice tests, which make tough memorization fun and easy. The authors make fairly dry anatomy applicable and interesting. Lots of visual examples and diagrams help break up the medical terms and concepts. Really strong textbook overall.1 of 1 people found the following review helpful. Book isn't too badBy SpartlaThere are several inaccuracies in the book, as others have noticed, but nothing too major. Diagrams are not put in positions to make following along with the text easy. Other than that, it reads fine and is more-or-less current.0 of 0 people found the following review helpful. Five StarsBy emmagood quality

Undergraduate communication science and disorder students. ANATOMY AND PHYSIOLOGY FOR SPEECH, LANGUAGE, AND HEARING is a core course for all Speech Pathology and Audiology students. In 2004, 239 colleges and universities offered graduate programs in speech-language pathology that are accredited by the Council on Academic Accreditation in Audiology and Speech-Language Pathology. Total undergraduate enrollment: 16,397. (Source: CAPCS, June 2006.) Total graduate enrollment: 7,389. (Source: CAPCS, June 2006.)

"Over all the editions of this text, the authors have produced a near perfect balance of 'not too simple, not too complex.'" The content areas are of sufficient depth for undergraduate students to be challenged, but not unduly overwhelmed."-Michael Blomgren, Associate Professor, University of Utah  
About the Author  
J. Anthony (Tony) Seikel, Ph.D., is professor of communication sciences and disorders at Idaho State University in Pocatello, Idaho. His research interests center on the relationship of pathology to acoustics and perception, as well as improving pedagogy through technology. He has recently been studying the relationship between oromyofunctional disorders and oropharyngeal dysphagia. He earned his B.S. in Speech and Hearing from Phillips University, his M.A. in Speech Pathology from Wichita State University, and a Ph.D. in Speech and Hearing Science from the University of Kansas.  
David G. Drumright is a programmer and teacher in Spokane, Washington. He has taught electronics at numerous schools and has a background in speech-language pathology and audiology. His software includes the original ANIMA programs of this text, the new ANATESSE application, AUDIN software for audiology instruction, and several other instructional tools.  
Douglas W. King, Ph.D., was a professor within the basic medical program at Washington State University until his death in 2001. He was greatly loved by his students and fellow faculty, and had set up a scholarship program in anatomy for students with diabetes.
