Kirk Heilbrun : Evaluation for Risk of Violence in Adults (Best Practices for Forensic Mental Health Assessments) before purchasing it in order to gage whether or not it would be worth my time, and all praised Evaluation for Risk of Violence in Adults (Best Practices for Forensic Mental Health Assessments):

1 of 1 people found the following review helpful. Very well written, clear and conciseBy DrcfwI have used this as a

reference on multiple occasions and have found it valuable. It is well written, well organized and provides a good foundation for those interested in the field of violence risk assessment. 3 of 4 people found the following review helpful. Heilbrun Does It Again By Joel A. Dvoskin For people with serious mental illness, the illness itself is often less disabling than the stigmatizing stereotype that people with mental illness should be feared. As with any stereotype, the remedy is more and better information. It is not enough to say that most people with mental illness pose no danger, as people will still overgeneralize from a few vivid case examples. However, mental health professionals and lawyers have no excuse for such bias, when a book like this is available. Professor Heilbrun's work is always stellar, but in this case he has truly outdone himself. No one writes about risk assessment with more clarity than Kirk Heilbrun. He has once again managed to cover an incredibly complex and sophisticated issue with comprehensiveness and simplicity; this is no small feat. This book is must reading for mental health professionals who conduct risk assessments, attorneys who request risk assessments, and judges who must decide if the quality of a risk assessment warrants expert testimony. I recommend it highly. 0 of 0 people found the following review helpful. Dry but necessary information By violet27A well written and informative book on a dry subject.

Forensic mental health assessment (FMHA) has grown into a specialization informed by research and professional guidelines. This series presents up-to-date information on the most important and frequently conducted forms of FMHA. The 19 topical volumes address best approaches to practice for particular types of evaluation in the criminal, civil, and juvenile/family areas. Each volume contains a thorough discussion of the relevant legal and psychological concepts, followed by a step-by-step description of the assessment process from preparing for the evaluation to writing the report and testifying in court. Volumes include the following helpful features: Boxes that zero in on important information for use in evaluations Tips for best practice and cautions against common pitfalls Highlighting of relevant case law and statutes Separate list of assessment tools for easy reference Helpful glossary of key terms for the particular topic In making recommendations for best practice, authors consider empirical support, legal relevance, and consistency with ethical and professional standards. These volumes offer invaluable guidance for anyone involved in conducting or using forensic evaluations.

"This small volume...is remarkable...this is a superb little volume that will be of tremendous assistance in assessments for future violence, for students and experienced practitioners alike."--PsycCRITIQUES About the Author Kirk Heilbrun is Professor and Head of the Department of Psychology, Drexel University
