Bruce Moore OD FAAO : Eye Care for Infants and Young Children, 1e before purchasing it in order to gage whether or not it would be worth my time, and all praised Eye Care for Infants and Young Children, 1e:

This award-winning text focuses on the early identification and treatment of vision development abnormalities that affect young children. Strabismus, amblyopia and refractive error, as well as ocular disease and pharmacology, are presented in terms specific to pediatric optometry.

From the Publisher This is the first comprehensive text on the optometric care of the infant and toddler. Clinically oriented, the author has also included theory and reference material throughout. One entire section is devoted to detailing ocular disease specific to infants and young children. The clinical diagnosis and optometric management of these disorders is strongly emphasized.
