**Frank Viscuso, Michael Terpak : Fireground Operational Guides** before purchasing it in order to gage whether or not it would be worth my time, and all praised Fireground Operational Guides:

0 of 0 people found the following review helpful. Great for the incident commander or aspiring fire officer! By JerseyFireHunter purchased to assist with oral portion of exam. I believe this is one of the materials that helped prepare me the most. Contains checklists to ensure efficient flow of fireground operations. Co authored by the awesome Deputy Chief Terpak of Jersey City Fire Department! 0 of 0 people found the following review helpful. What every Officer needs!!! By Joe matullo This book is one that every officer needs to have with them on the rig and around the fire house. This is a tremendous book to set up operational training and to perpare yourself along with your crew to carry out safe and productive operations. This book deals with all types of senerios and how to break them down, along with the tactial worksheet. 0 of 0 people found the following review helpful. Another great tool By William L. Tuttle The authors do a fantastic job of creating an easy to follow guideline to running a job. It won't teach you how to

put out a fire (if you need that info grab another book first) but if you already can it will give you a checklist of things to do and an order for doing them that will make you a more efficient officer.

This important new book is designed to serve many purposes in the fire service, ranging from being a starting point and refresher guide for firefighters seeking promotions at any level, to being a field operational guide for on-scene Incident Commanders and Company Officers. It offers an easy-to-follow, step-by-step action plan for firefighters working in Acting Capacities, and can be used when developing SOPs, and when organizing and planning training evolutions. Its definitely a book every firefighter, officer, and aspiring officer will want to own!

I have read a couple sample guidelines on Fire Engineerings forum and on fireopsonline.com. I like how they take complex topics and break them down to the simplest formats. As a volunteer firefighter, I couldnt imagine a book with more useful information. I cant wait to get my copy. (Steve Weston)
