Tao Le, Kendall Krause : First Aid Basic Sciences 2/E (VALUE PACK) (First Aid USMLE) before purchasing it in order to gauge whether or not it would be worth my time, and all praised First Aid Basic Sciences 2/E (VALUE PACK) (First Aid USMLE):

12 of 12 people found the following review helpful. this book are perfect for that they compliments First Aid very well. By RiRi I am the type of person that needs to understand the why of things to memorize them, this book are perfect for that they compliments First Aid very well. It doesn't just have just key notes just for random memorization factor it helps you learn. I graduated in a foreign country and taking step 1 so I have to go back maybe 5 years and remember all the tiny different details, English is not my first language sometimes I just don't know the abbreviations used in most books, I love that it explains things in a way it's easy for me to understand. This book is very easy to follow, very organized. I would recommend this all the way. Also the pictures and graphs are very well done. 20 of 21 people found the following review helpful. I love these books. By John Smith These books are basically the first two years of school canonized and made available for far less than the cost of tuition. The green one is more or less first year, the red one is pretty much gold in second. If you are about to start your first year read the green one over summer (well, do that or watch the Ackland video anatomy atlas). If you are about to start second year read the red one after you get back from your mission trip to Africa or wherever. You will thank me later. The regular first aid is of course a must as well, but that is way less interesting and isn't really designed for learning; it's a review book. These you can actually learn from. This plus Goljan is a solid place to start. Cannot recommend these (or the video atlas) highly

enough. 2 of 2 people found the following review helpful. they are also good for other practitioners (NPs PAs) who want a ...By WMRA Although these texts are designed for medical students during years 1 2, they are also good for other practitioners (NPs PAs) who want a good understanding of the basic medical sciences (e.g., histology, biochemistry, microbiology, immunology, pathology, and pharmacology). They're also great for providing a solid, concise understanding of the embryology, anatomy, physiology, pathology, and pharmacology of organ systems. For the nurse practitioner, if you want to expand your understanding of medical science and be able to converse with physicians on a highly technical level, which we should be able to do, then these books are for you!! Personally, I think NP programs (especially at the DNP level) should incorporate these subjects into the curriculum!!!
