Brian Taylor, H. Gustav Mueller : Fitting and Dispensing Hearing Aids before purchasing it in order to gage whether or not it would be worth my time, and all praised Fitting and Dispensing Hearing Aids:

1 of 1 people found the following review helpful. This book was wonderful. I've been studying this topic for close to ...By DonnaThis book was wonderful. I've been studying this topic for close to a year, and although I've read this information a number of times, this was the first book that put many of the specific crucial points in a way that were easy to understand. The book is loaded with links to additional information either on websites, or referrals to

additional books if you want to explore a specific topic further. Unlike many of the other books I've read, this one approaches the topic with a sense of humor which helps make it much more interesting. This is definitely a book I would recommend for anyone in this field's library. 4 of 4 people found the following review helpful. Easily readable
By LEILA MARTIN This is a great book for people new to the field, as well as for those who have been around forever and need to catch up recent developments. I learned a lot, and my apprentices who are just learning the material appreciate the humor and approachability of its prose style. If I could give it more than 5 stars, I would..0 of 0 people found the following review helpful. Good basic text
By Paul-BC Basic text at the beginner's level. We'll organized. You can ignore the folksy style and focus on the good information.

This introductory book is written for ENTs, prospective hearing instrument specialists studying to obtain their state license, audiology assistants, and speech pathologists working with hearing impaired adults. It also is an excellent introduction for Au.D. students or practicing audiologists just beginning work with hearing aid dispensing. This extremely practical and engaging book logically takes the reader from beginning to end of the entire hearing aid selection and fitting process. The chapters sequentially provide the reader with the essential knowledge needed to fit modern hearing aids, along with links to handy websites for further study and reference. The authors, who both are experienced in the day-to-day fitting of hearing aids, and have taught hundreds of students with a variety of backgrounds, provide a consistent overview of the fundamentals of the entire hearing aid selection process. The chapters provide step-by-step guidelines covering both the art and science of hearing aid fitting.

The new book from Drs. Brian Taylor and Gus Mueller uniquely fills the need for an up-to-date, well written and comprehensive text for students and new practitioners interested in modern approaches, advances and technology with regard to hearing aid amplification. --Douglas L. Beck Au.D., Board Certified Audiology, American Academy of Audiology, (June 2011)
About the Author Brian Taylor, AuD is currently the Director of Practice Development Clinical Affairs for Unitron. He is responsible for all best practice initiatives and customer loyalty programs for Unitron in the United States. Over the past 20 years he has dispensed hearing aids in both retail and medical settings, including Rockford Clinic and Sonus. Prior to his current position, he was the Director of Professional Development for Amplifon and served as their Global Training Manager in Milan, Italy. Dr. Taylor has written and lectured extensively on several topics, including practice management and evidence-based hearing aid selection and fitting approaches. Brian holds an Au.D from Central Michigan University and a master's degree in Audiology from the University of Massachusetts-Amherst. He currently resides in Minneapolis.
Dr. H. Gustav Mueller is Professor of Audiology, Vanderbilt University and holds faculty positions with the University of Northern Colorado and Rush University. He is the Senior Audiology consultant for Siemens Hearing Instruments and Contributing Editor for AudiologyOnline. Dr. Mueller is a Founder of the American Academy of Audiology and a Fellow of the American Speech and Hearing Association. He has published extensively in the areas of diagnostic audiology and hearing aid applications, and has co-authored several books, including the Audiologists Desk Reference (Volumes I and II) and Fitting and Dispensing Hearing Aids. Gus is the co-founder of the popular website earTunes, and resides on a North Dakota island, just outside of Bismarck.
