**From Woodhead Publishing : Foods, Nutrients and Food Ingredients with Authorised EU Health Claims:
Volume 2 (Woodhead Publishing Series in Food Science, Technology and Nutrition)**

before purchasing it in order to gauge whether or not it would be worth my time, and all praised Foods, Nutrients and Food Ingredients with Authorised EU Health Claims: Volume 2 (Woodhead Publishing Series in Food Science, Technology and Nutrition):

The second volume of Foods, nutrients and food ingredients with authorised EU health claims continues from Volume 1, which provided a comprehensive overview of many of the permitted health claims for foods and nutrients approved under European Regulation EC 1924/2006. This new volume discusses more of the health claims authorised to date for use in the EU. The chapters cover details of various permitted claims, such as the approved wording, conditions of use, the target group for the claims, the evidence for the claimed health benefits, and where appropriate details of other relevant legislation, consumer-related issues and future trends. The book opens with an overview of regulatory developments relating to health claims. Part One reviews authorised disease risk reduction claims and proprietary claims. The second part investigates ingredients with permitted 'general function' claims, with chapters examining ingredients such as red yeast rice, glucomannan and guar gum. The final section of the book explores foods and nutrients with permitted health claims, including chapters on authorised EU health claims for prunes, foods with low or reduced sodium or saturated fatty acids, and claims for essential and long chain polyunsaturated fatty acids. Building on volume 1, this title ensures that the area of EU health claims in food is comprehensively covered. Chapters are devoted to individual food ingredients and substances, covering the range of issues related to health claims. Health-promoting products are an increasing consumer trend in product development and this book provides key information on these advances.

About the Author: Michele Sadler has been working as an independent nutrition consultant, with experience as a nutritionist at BNF and IGD. Her company, Rank Nutrition Ltd, focusses on the application of nutrition science within the food industry, including nutritional strategy, new product development and product positioning particularly in the area of health claims, advice on product composition, compiling dossiers for health claim applications, and advising on protocols for clinical trials to support health claim applications.
