I worked as an economist in St. Lucia for the Rockefeller Foundation when they were involved in eradicating schistosomiasis in the late 60s. When I arrived I was told there were Peace Corps people there, I went to see them and found them playing baseball barefoot in a large low lying field. I asked them if they had ever heard of hookworm. Duh!!! The Peace Corp had given them no training or education on parasitological diseases. Ignorance is one of the greatest problems. Bravo for this author and this book. These diseases are huge problems and too few people are aware of them or doing anything about them.Midwest Independent Research, educational websites. Health care information, mwir-healthcareinformation.blogspot. There are book lists here, including one on infectious diseases.2 of 2 people found the following review helpful. Five StarsBy Muhammad Yasser Al SafadiGreat introduction to the world of neglected tropical diseases. Easy read and suitable for medical and non medical readers.

The neglected tropical diseases (NTDs) are the most common infections of the world's poor, but few people know about these diseases and why they are so important. This second edition of *Forgotten People, Forgotten Diseases* provides an overview of the NTDs and how they devastate the poor, essentially trapping them in a vicious cycle of extreme poverty by preventing them from working or attaining their full intellectual and cognitive development. Author Peter J. Hotez highlights a new opportunity to control and perhaps eliminate these ancient scourges, through alliances between nongovernmental development organizations and private-public partnerships to create a successful environment for mass drug administration and product development activities. *Forgotten People, Forgotten Diseases* also addresses the myriad changes that have occurred in the field since the previous edition. Describes how NTDs have affected impoverished populations for centuries, changing world history. Considers the future impact of alliances between nongovernmental development organizations and private-public partnerships. *Forgotten People, Forgotten Diseases* is an essential resource for anyone seeking a roadmap to coordinate global advocacy and mobilization of resources to combat NTDs.
