With contributions from an established team of experts on the subject, this reference illustrates current practices and

techniques in the care of patients with foot and ankle fractures-demonstrating treatment methods for fractures and dislocations, pediatric injuries, soft tissue management, crush injury, and post-traumatic reconstruction.

one of the only studies of its kind to dedicate itself to a complete dissection of injury and disease as it relates to the foot/ankle region of the human anatomy. Well defined and impeccable researched, this text compiles the most recent scientific research and thinking on the foot.
