3 of 5 people found the following review helpful. wonderful for chiropractic students/doctorsBy A CustomerDr. Hammer is a great writer. He doesn't ignore the subluxation complex as in some texts supposedly related to chiropractic. Dr. Hammer shows how soft tissue injury is related to the subluxation. When I took the national boards of chiropractic, I used this book as one of my references for Part II section--Chiropractic Practice, and also for Part III. Little advice for taking the boards, get Souza's book, Differential Diagnosis for the Chiropractor. Also, Patrick Leonardi's study guides, National Board of Chiropractic Part II Study Guide: Key Review Questions and Answers, National Board of Chiropractic Part III Study Guide: Key Review Questions and Answers with ExplanationsThese study guides have questions that were excellent because they were the kind encountered on the exams. Also souza's book was very helpful for chiropractic practice and Part III. Dr. Warren's book was also on the mark for Chiropractic Practice section of part II.17 of 17 people found the following review helpful. Functional Soft Tissue Examination and Treatment by Manual MBy Matt StraussAs an athletic trainer at a large high school in Pennsylvania, I found this book very helpful in every day treatment of various ailments my athletes complained of. Although the process can be complex, the soft tissue treatments are very helpful and this book I have found to be a very valuable asset.

This edition has chapters written by experts in the methods of manual treatment and provides step-by-step instructions on how to examine patients using a logical sequence of passive, contractile, and special tests, and how to relate the findings to biomechanical problems and lesions. It includes diagrams, photographs, illustrations, and summary charts. Chapters from the first edition have been revised and updated and material has been added on myofascial release, somatics, post-facilitation stretch, hypo and hyperpronation of the foot, strain and counter strain, gait.
