Published on the 100th anniversary of Roentgen's discovery of x-rays, this edition contains updated and expanded coverage which reflects the ongoing revolution in the variety and uses of radiographic imaging techniques. To aid the explication of concepts and procedures, computed tomography and magnetic-resonance images - many new to this

edition - are provided. New chapters cover topics including: cross-sectional images, allowing the reader to review normal radiographic anatomy; vascular imaging, including vascular ultrasound, 3-D computed tomography and MR angiography; interventional radiology, covering therapeutic procedures performed by diagnostic radiologists; and imaging conditions specific to each gender, including breast, obstetric, gynecological, testicular and urethral disorders.

About the Author Robert A. Novelline, M.D., is Professor of Radiology, Harvard Medical School. He is also Director, Emergency Radiology, and Director, Undergraduate Radiology Education, Massachusetts General Hospital.
