Richard A. Jaffe : Galileo's Lawyer: Courtroom Battles in Alternative Health, Complementary Medicine and Experimental Treatments before purchasing it in order to gage whether or not it would be worth my time, and all praised Galileo's Lawyer: Courtroom Battles in Alternative Health, Complementary Medicine and Experimental Treatments:

1 of 1 people found the following review helpful. FascinatingBy CustomerJaffe's book is a great read. His writing style is witty and engaging. Sadly, he candidly reveals the shady behavior going on in government in attempts to silence gifted doctors and researchers and to take away our freedom to choose our own healthcare. As the title suggests, this isn't the first time in history that discoveries and discoverers have been attacked and ostracized. I'm grateful to discover that there are a few lawyers out there who are willing to take on the government in defense of liberty.0 of 0 people found the following review helpful. Five StarsBy Y. NoroIf you truly want to understand how sausages are made, here's the reality of how medical conglomerates operate.1 of 2 people found the following review helpful. Essential Reading On Suppression of Effective Alternatives in MedicineBy Anthony G. HollandAn essential and exciting read from the country's most experienced attorney in defending effective alternative medical treatments. Read about his real life heroic victories in trying to give all Americans the right to choose their own medical treatments, rather than have the medical industrial complex force unwanted and ineffective treatments on all patients.Read the chapter: 'The Burzynski Wars' (get 'Burzynski The Movie' Burzynski, the Movieand the book 'The Burzynski Breakthrough'The Burzynski Breakthrough: The Most Promising Cancer Treatment and the Government's Campaign to Squelch It, which are perhaps the most important film and book on one of the most effective alternative cancer treatments today!).The uninformed often state "if such and such alternative treatment for disease X actually worked, then I'm sure it would be made available". Wrong! Read this book and find out why! Find out how far various medical organizations have gone to suppress the rise of alternative medicine and medical procedures which in many cases have resulted in miraculous cures of diseases like cancer.If you want to get some idea of the future of medical treatments for cancer, just as one example, go to google scholar and research "Novocure" and their frequency-specific electric fields that are used to destroy cancer cells. This is a billion dollar multinational company that is snapping up patents around the globe for the use of frequency-specific electric fields to kill cancer cells (no chemo or radiation needed!). Their device recently passed FDA Phase 3 trials and they have now established several clinics in the USA for the treatment of brain cancer with frequency-specific 'specially tuned' electric fields!The current medical industrial complex is aware that people are sick and tired of 'standard of care' therapy that is not effective, except for killing the patient and extracting as much money from them as possible in the process. READ THIS BOOK and see how hard the established medicals are fighting to protect their turf..... every kind of dirty trick in the book! They don't care about making you well... they care about protecting their jobs and their incomes, even when they know their treatments are ineffective. If you get caught in the contemporary 'medical meat machine', it will grind you up. Wake up and read about the alternatives that might save your life while also preserving some quality of life at the same time.

Galileo's Lawyer is an insider's view of the Alternative Health field based on the legal battles between medical mavericks, their patients, and the government and the church of medical orthodoxy. The book relates courtroom dramas such as the government's fourteen year battle against the Burzynski Cancer Clinic in Houston. It also tells how the government stopped a promising stem cell treatment, explains the battles between nutritionists and the registered dietitians, describes how New Jersey chiropractors fought against the government (and won), explains why naturopaths are prosecuted for practicing medicine without a license, and presents other stories involving experimental treatments and medical pioneers.

If you are someone with an interest in alternative or holistic health . . . Galileo's Laywer is required reading. Written by Richard Jaffe, Esq., a noted defense attorney who has battled for years in the trenches fighting to preserve freedom of choice in healthcare, and to protect the rights of those who dare to make a difference in their patients' lives by practicing out of the mainstream of traditional medical thought. Galileos Lawyer manages to accomplish something not often seen in books of this type - it is both educational and reveting. Jaffe represented the Houston complementary and alternative medicine pioneer, Stanislaw Burzynski, in what Jaffe describes as The Burzynski Wars. If you are somewhat new to the idea of alternative health, you will find Galileo's Lawyer eye-opening. If you have some experience in this realm, the book will only confirm what you have always suspects, as Jaffe deftly details the courtroom wars and the governmental and special interest group over-reaching that has been the norm in the alternative heathcare arena. Galileo's Laywer makes it easy to see the importance of protecting the individual's right to choose the type of healthcare options to follow, along with the need to bring balance and reasonableness to the government's role in policing healthcare. As Jaffe points out, this balancing act continues, and it is up to each of us to be aware and be informed about the issues. --Enjoy Whole Health, June 2008About the AuthorRichard A. Jaffe is an attorney who travels around the country defending medical mavericks. He is a graduate of the Hebrew University of Jerusalem where he studied Philosophy and the History and Philosophy of Science and Columbia University where he studied law.
