Gender, Race, Class, and Health examines relationships between economic structures, race, culture, and gender, and their combined influence on health. The authors systematically apply social and behavioral science to inspect how these dimensions intersect to influence health and health care in the United States. This examination brings into sharp focus the potential for influencing policy to improve health through a more complete understanding of the structural nature of race, gender, and class disparities in health. As useful as it is readable, this book is ideal for students and professionals in public health, sociology, anthropology, and women's studies.

"...pathbreaking in clarifying how and why intersectional approaches to health research will best allow us to understand and formulate applied solutions to address health disparities." (Gender and Society) "...coherent illustration of potential contribution of qualitative social science to debates on disparities in health." (New England Journal of Medicine, January 18, 2007) "More and more students in public health, sociology, and anthropology are studying these intersections but this is arguably the first book to truly do justice to the topic." —Meredith Minkler, professor of Health and Social Behavior, University of California, Berkeley, and coeditor, Community Participatory Research for Health "Weaving a beautiful tapestry out of the cutting edge views of an outstanding group of interdisciplinary scholars, this edited volume provides new depth and focus to the study of intersectionality and health." —Sherman A. James, Susan B. King Professor of Public Policy Studies, Duke University, Durham, North Carolina "At last, a groundbreaking book highlighting the health consequences of the intersections of race, gender, and social class! Linking public policy and cultural analysis to ethnographic and biomedical data, the volume provides important insights into how intersecting inequalities have complex consequences on the ground and under the skin." —Alan H. Goodman, president-elect, American Anthropological Association and professor, Biological Anthropology and Natural Science, Hampshire College, Amherst, Massachusetts
