From World Scientific Publishing Company : The European Union as a Global Health Actor (Global Health Diplomacy) before purchasing it in order to gage whether or not it would be worth my time, and all praised The European Union as a Global Health Actor (Global Health Diplomacy):

This book provides a systematic collection of EU actors, EU policy and EU actions in global health. It answers key questions on governance of the EU and its policy processes. The book starts with an introduction to the EU as a global actor and continues to outline the historical development and the Treaty basis for health, including the Maastricht and Lisbon Treaties. It also discusses the Commission's global health communication and the subsequent Council Conclusions on global health. Both documents define EU values in global health and identify the future priorities for global health action in the EU. Four of the five priorities are then described from the perspective of a different country experience. The book also considers the opportunities for research and provides an overview of the political, legal and financial instruments available to the EU. It also explores the global health architecture and processes within which the EU is acting, namely at the WHO, in the different multilateral organizations, and in global public health international treaties and regulations. Finally, the book addresses the importance of policy coherence at a national level and provides critical viewpoint on the EU as a global health actor. The book will assist practitioners working in policy making and international negotiations affecting health, as well as students and researchers, to create a better understanding of the European Union, its role in global health, and the uniqueness and specificity of the EU as a global health actor. It provides an overview of how the EU can act in global health and outlines the intersections of health and other sectors, as well as the instruments available to the EU to act effectively at a global level. The collection of contributions in this form and from this health policy perspective are not yet found elsewhere on the market.
