**Andrew Nikiforuk : The Fourth Horseman: A Short History of Epidemics, Plagues, Famine and Other Scourges** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Fourth Horseman: A Short History of Epidemics, Plagues, Famine and Other Scourges:

The author shows how feeble mankind's attempts to subdue the "super organism" of bacterial life has been. He reviews the great levelers: malaria, leprosy, the Black Death, the plague, syphilis, small pox, tuberculosis, flu and Aids. The author puts forward the controversial view that conquering HIV does not necessarily mean the conquering of Aids and AZT is as dangerous and unsuccessful a "cure" as mercury was for syphilis in the 18th century.
