From Ingramcontent : The Human Enhancement Debate and Disability: New Bodies for a Better Life before purchasing it in order to gage whether or not it would be worth my time, and all praised The Human Enhancement

Debate and Disability: New Bodies for a Better Life:

Improving human characteristics goes beyond compensating for an impairment. This book explores the rich and complex relationship between enhancement and impairment, showing that the study of disability offers new ways of thinking about the social and ethical implications of improving the human condition.

This book brings out a new voice from the disability studies perspective in the debate regarding human enhancement. Therefore, I heartily recommend this book to everyone interested in ethical issues involved and especially to those that are interested in an intersection between bioethics and disability studies. The book is a great example of how various scientific fields can significantly contribute to the ongoing debate on human enhancement. (Anto artolovni, *Theoretical Medicine and Bioethics*, Vol. 37, 2016)"An important and welcome development to see a selection of studies that explores how bioethics and disability studies can influence each other to ask new questions." - *Disability and Society* About the Author Stuart Blume, University of Amsterdam, The Netherlands Sigrid Bosteels, University College of West Flanders, Belgium Morten Hillgaard Blow, University of Copenhagen, Denmark Sascha Dickel, Institute of Ecological Economy Research, Germany Lisa Forsberg, King's College London, UK Trijsje Franssen, University of Exeter, UK Kathrin Klohs, University of Basel, Switzerland Nikolai Mnch, Friedrich-Schiller-University, Germany Anna G.
