The No-Hassle Guide to HIPAA Policies: A Privacy and Security Toolkit, Second Edition, is a clear, comprehensive, and user-friendly resource with 40 sample policies and 21 sample forms to help ensure HIPAA compliance. Covered entities and their business associates can customize the sample forms and policies to meet the needs of their organizations and satisfy longstanding HIPAA requirements and new Omnibus Rule requirements. The sample forms and policies are also available in the online Appendix to facilitate use and customization. WHAT'S NEW? Revisions

in this edition that pertain to the Omnibus Rule apply to the following privacy rights and organizational responsibilities: - Privacy and security incident response - BA contracts - Uses and disclosures of protected health information (PHI) for fundraising - Uses and disclosures of PHI for marketing and sale - Right to inspect, copy, and request transmittal of one's PHI - Right to request restrictions on one's PHI - Notice of privacy practices - Updated policies and forms

BENEFITS The HIPAA Omnibus Rule (enforceable September 23, 2013) made significant changes to the healthcare landscape by expanding patient privacy rights and organizations obligations. This set of revised privacy and security policies and forms will help covered entities and business associates (BA) develop clearly written policies and associated procedures that describe the rules by which the workforce operates. This helps ensure consistency in how work processes are performed and establishes expectations for workforce conduct.
