Jones Bartlett Learning : The Official Laboratory Research Notebook (50 duplicate sets) before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Official Laboratory Research Notebook (50 duplicate sets):

0 of 0 people found the following review helpful. Biochemist's First Official Laboratory Notebook By Jason As a biochemistry PhD student (and biochemistry BS as well) I have taken more laboratory classes than I care to share. This was my first laboratory notebook and really helped me develop superb note-taking skills for one reason in particular. Each page in this notebook is backed by a carbon-copy sheet so that you can rip it out and hand in a copy. At the end of each experiment, my teacher would tell us to rip out the "copy" page for his records. He did this so that when we handed in the notebook at the end of the semester he could ensure that we didn't add or change anything in the notebook because he had his copy to reference. Although at the time I hated it, I actually thank that professor now for teaching me to take copious notes WHILE PERFORMING AN EXPERIMENT. I cannot stress the importance of doing this and I think this notebook is ideal for an up-and-coming scientist who wants to learn to hone their laboratory skills. I would recommend anybody teaching a laboratory class to force their students to hand in the

carbon copy as my professor did. 0 of 0 people found the following review helpful. A costly necessity! By Arien Faye Have already gone through several of these. Very pricey but handy! 0 of 0 people found the following review helpful. Four Stars By Bill W Boyles As advertised.

As the company that has been providing chemistry labs with the best-selling lab notebook for years, Jones and Bartlett Publishers is pleased to present a new generation of lab research notebooks. These notebooks retain the features from earlier versions that made them best-sellers, and have incorporated some exciting new features.
