in the following order.... Ocular emergencies (True emergencies - therapy should be instituted within minutes)..... Urgent case: to be seen within the hour .....Urgent case: to be seen the same day.... Priority case: to be seen within days.... but the actual order places the section 'urgent case: to be seen within the hour' behind priority cases.I found it frustrating that there was no way to match page numbers to Kindle pages.But not all problems can be blamed on having a Kindle edition....Throughout the text, the quality of the writing was inconsistent.Telling your reader-students, the majority of whom are new to the field, go find answers elsewhere is not helpful..... (from Chapter 1 "Answers to some of the questions at the end of each chapter may be found in other parts of this book or, in some cases, only in other sources."Also not helpful: providing photo illustrations review questions for conditions or disorders that are not explained in the book. (vernal conjunctivitis, for example) At least include a definition in the glossary.1 of 1 people found the following review helpful.
