William F. Bria, Richard L. Rydell : The Physician-Computer Connection: A Practical Guide to Physician Involvement in Health Care Information Systems (J-B AHA Press) before purchasing it in order to gage whether or not it would be worth my time, and all praised The Physician-Computer Connection: A Practical Guide to Physician

Involvement in Health Care Information Systems (J-B AHA Press):

To support the critical role of physicians in the successful implementation of a patient care information system (PCIS), the authors detail a plan for developing physician task forces and "physician champions" and suggest innovative ways to train physicians to use the technology effectively. This revised edition covers the influence of managed care on information systems, the benefits of clinical decision support to a PCIS, and such emerging technologies as telemedicine, wireless computing, and clinical applications of the World Wide Web.

From the Inside Flap To support the critical role of physicians in the successful implementation of a patient care information system (PCIS), the authors detail a plan for developing physician task forces and "physician champions" and suggest innovative ways to train physicians to use the technology effectively. This revised edition covers the influence of managed care on information systems, the benefits of clinical decision support to a PCIS, and such emerging technologies as telemedicine, wireless computing, and clinical applications of the World Wide Web. From the Back Cover To support the critical role of physicians in the successful implementation of a patient care information system (PCIS), the authors detail a plan for developing physician task forces and "physician champions" and suggest innovative ways to train physicians to use the technology effectively. This revised edition covers the influence of managed care on information systems, the benefits of clinical decision support to a PCIS, and such emerging technologies as telemedicine, wireless computing, and clinical applications of the World Wide Web. About the Author WILLIAM F. BRIA, is the medical director of clinical information systems and medical codirector of the critical care medical unit, asthma-airway program, and an assistant professor of medicine in the Department of Internal Medicine at the University of Michigan Medical Center (UMMC) in Ann Arbor. He has been a board-certified specialist in internal medicine and pulmonary diseases since 1982. Dr. Bria is responsible for the selection, design, and implementation of the Applied Clinical Informatic program at UMMC and has implemented a course for second-year medical students at the University of Michigan for the past four years. He has been a leader in educating physicians in the application of information technology to clinical practice for more than 15 years. RICHARD L. RYDELL is president of the Keene Research Institute (KRI), a health care information management research, education, and consulting organization. Mr. Rydell cofounded KRI in 1992 to promote physician involvement with information technology and develop the Physician-Computer Connection Annual Symposia. He has been a leading health care chief information officer, serving as senior vice-president and chief information officer at Memorial Health Services in Long Beach, California, and vice-president and chief information officer at Baystate Health Systems, Springfield, Massachusetts. Mr. Rydell is a fellow in the American College of Healthcare Executives, and is a fellow, past board member, and past national president of the Healthcare Information and Management Systems Society. He has served as an executive board member of the Center for Healthcare Information Management, a founder, trustee, and vice chairman of the College of Healthcare Information Management Executives (CHIME), and chairman of the CHIME Institute. Mr. Rydell is a charter member of the Health Information Systems Executive Association and a past international board member of the Society for Information Management.
